

Booster Car Seat Promotion A Big Success!

On Thursday, November 21, The Red Cliff Community Injury Prevention Committee provided 35 free Booster Seats for children that have outgrown their regular car seats. These children are not quite big enough for the seat belt system in a car, so a booster seat is used to assure that the lap and shoulder belts support the child in the correct locations on their bodies. A booster seat is needed by many children from 4 to 9 years of age. Also, any kids that weigh between 40-80 pounds should be secured in a booster seat while riding in the car. If you missed this promotion and would like a free booster seat, please contact Rose Gordon at the Red Cliff Health Center 779-3707.

Dennis Soulier, Jr. and Rose Gordon installing a new booster child safety seat for Maria Basina. Dennis and Rose are Certified Passenger Safety Technicians, trained to properly install car seats and educate parents on all styles of child safety seats and vehicle seat belt systems.
